

Humidity control window

Can be screwed in connection with aluminum composite foil to monitor the relative humidity

with indicator card

with dynamic QR code

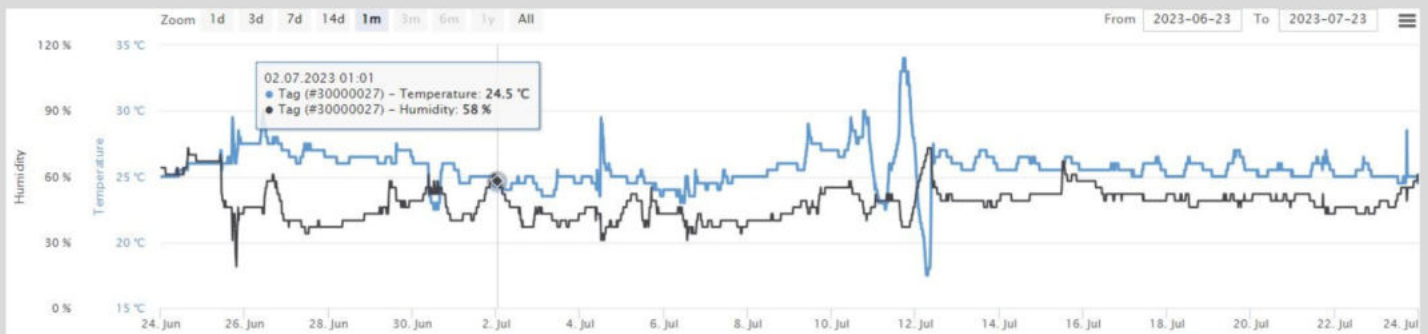

Shows rel. humidity by discoloration

Color change from blue to pink.
Reversible - if the moisture content decreases, the indicator changes colour back.

Temperature and humidity without gaps

Recording up to 4 years.

Scan the QR code with any smartphone using the built-in camera app. Automatic data transfer to the cloud.

Analysis and evaluation function via the dynamic QR code

The constantly changing dynamic QR code on the e-paper display contains the temperature and humidity data recorded by the sensors. Data access via cloud login with user and project organization.
